

Pemilihan Lokasi Mini CNG Plant dengan Metode
ANP (*Analytical Network Proses*) serta Optimasi
Rantai Pasok CNG ke Bali, Nusa Tenggara Barat,
dan Nusa Tenggara Timur.

Rumusan Masalah

1

Bagaimana cara **memilih lokasi CNG Plant di Kepulauan Kangean** dengan metode ANP (*Analytical Network Process*) ?

2

Bagaimana **desain model pendistribusian CNG yang optimal**, meliputi kapasitas kapal CNG, jenis kapal CNG, serta kapasitas pada terminal pengirim?

3

Bagaimana analisa biaya modal (*capital cost*) pembangunan terminal CNG dan proses distribusi CNG dari lokasi terpilih ke Bali, NTB, dan NTT.?

Tujuan Penelitian

1

Mendapatkan lokasi CNG Plant di 4 alternatif lokasi yang terpilih yaitu di Pulau kangean, Pulau Raas, Pulau Sapudi dan Pulau Talango

2

Merancang sistem distribusi Gas yang optimal dari CNG Plant di lokasi yang terpilih ke konsumen

3

Mendapatkan analisa biaya modal (*capital cost*) pembangunan terminal CNG dan proses distribusi CNG dari lokasi terpilih ke Bali, NTB, dan NTT.

Batasan Masalah

1

Penentuan pemilihan lokasi CNG Plant di Kepulauan Kangean hanya di empat lokasi yaitu Pulau Kangean, Pulau Raas, Pulau Sapudi dan Pulau Talango

2

Jumlah gas yang akan di suplai sebesar 82 mmscfd.

3

Pendistribusian gas ke daerah Bali, NTB, dan NTT.

Kesimpulan

Kesimpulan

1. Dalam pemilihan lokasi pembangunan mini CNG plant, maka lokasi yang paling optimal berdasarkan perhitungan dengan menggunakan software *super desicion* adalah di Ds. Pagerungan kecamatan Sapeken kepulauan kangean Sumenep.
2. Dalam pendistribusian CNG dari terminal gas Pagerungan ke tiga lokasi yang akan disuplai yaitu Celukan Bawang (Bali), Nusa Tenggara Barat, dan Nusa Tenggara Timur, model distribusi yang efektif dengan total cost yang paling minimum adalah model 2, dengan uraian sebagai berikut
 - ❖ Pelayaran Dari Pgerungan-Bali menggunakan kapal Cosele C25 sebanyak 2 unit dengan 97 Round trip per tahun
 - ❖ Pelayaran Pagerungan-NTB-NTT menggunakan kapal jenis C30 sebanyak 1 unit dengan 87 kali round trip per tahun
3. Total biaya transportasi yang dibutuhkan untuk 1 tahun pada model 2 didapatkan sebesar \$ 247.210.482,78 . untuk dapat mengembalikan modeal, maka minimal margin penjualan gas sebesar UDS 4,25 per mmbtu.
